

Acoustic Pods

**Phone call,
individual focused
work or team
meeting – designed
with more than one
purpose in mind,
acoustic pods
minimize distractions
to provide
the right place
to get work done.**

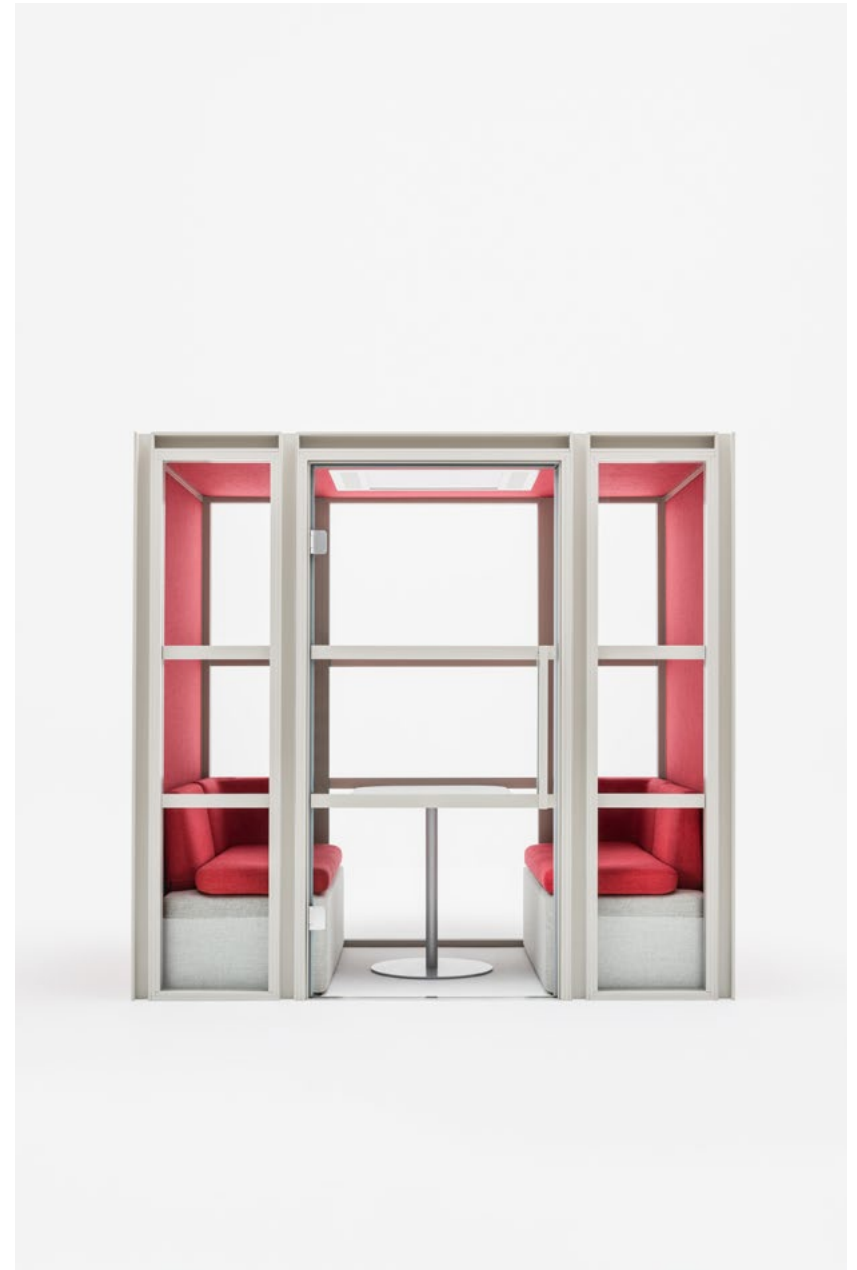

Hako

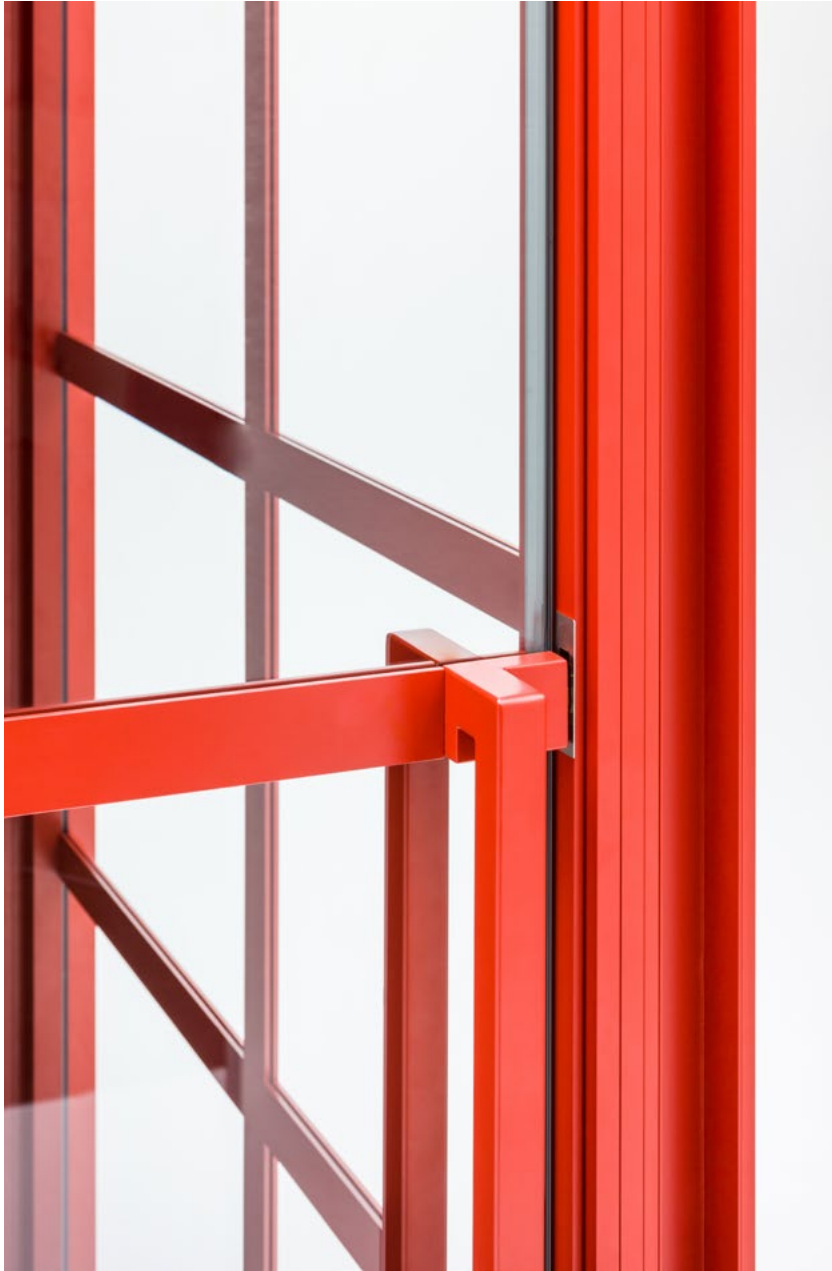

by Dymitr Malcew

Inspired by industrial architecture and storage rooms – the Hako soundproof pods improve the acoustic quality of contemporary office spaces.

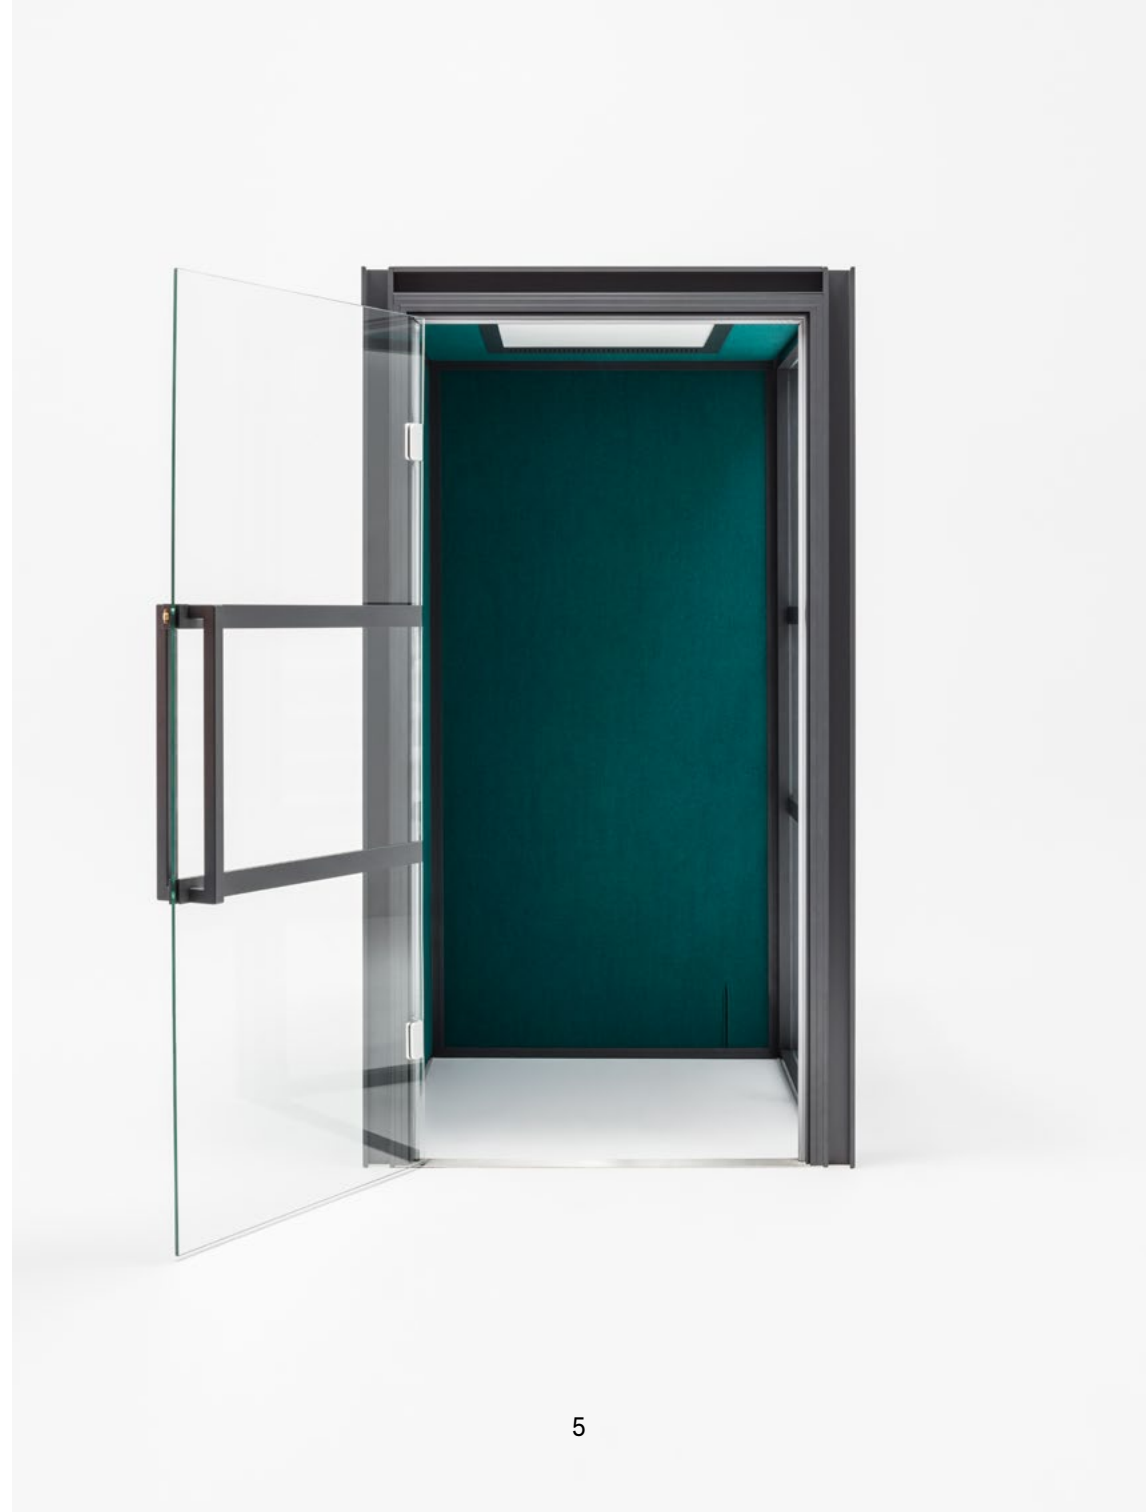

Meaning 'a box' in Japanese, their name refers to a traditional Japanese grid systems and highlights the modular look of its structure. The variety of components allows us to create multifunctional architectural

pieces: from private pod to meeting room accommodating several people. As the bottom part of the booth is eliminated, it features mobility, meets the needs of disabled people and facilitates cable management, and all that without compromising stability. Work comfort is given a boost thanks to automatic light and silent fans. Dividing office space without building permanent walls, Hako ensures privacy during meetings.

Hana

by Dymitr Malcew

Quiet zones in demanding and buzzing office spaces – the Hana acoustic pods work well in even the most dynamic environment.

Their modular structure and ergonomic form of a phone booth offer a variety of possible arrangements meeting workers' diverse needs – for a place for phone calls or individual focused work. This arrangement can be easily modified. Inspired by triangular flower leaves, its characteristic

shape completes the look of a contemporary office highlighting the interior design and improving employees' creativity. With an automatic lighting, quiet fans and transparent ceiling ensuring the light comes from the outside the Hana pods provide comfort to their users. Sound absorbing material that's used on the inside as well as outside walls improves not only acoustics of the booth itself but also of the whole office environment.
